

Your child at 30 months*

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by 30 months. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- Plays next to other children and sometimes plays with them
- Shows you what she can do by saying, "Look at me!"
- Follows simple routines when told, like helping to pick up toys when you say, "It's clean-up time."

Language/Communication Milestones

- Says about 50 words
- Says two or more words, with one action word, like "Doggie run"
- Names things in a book when you point and ask, "What is this?"
- Says words like "I," "me," or "we"

Cognitive Milestones (learning, thinking, problem-solving)

- Uses things to pretend, like feeding a block to a doll as if it were food

- Shows simple problem-solving skills, like standing on a small stool to reach something
- Follows two-step instructions like "Put the toy down and close the door."
- Shows he knows at least one color, like pointing to a red crayon when you ask, "Which one is red?"

Movement/Physical Development Milestones

- Uses hands to twist things, like turning doorknobs or unscrewing lids
- Takes some clothes off by himself, like loose pants or an open jacket
- Jumps off the ground with both feet
- Turns book pages, one at a time, when you read to her

* It's time for developmental screening!

At 30 months, your child is due for general developmental screening as recommended for all children by the American Academy of Pediatrics. Ask the doctor about your child's developmental screening.

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

1. Ask for a referral to a specialist who can evaluate your child more; and
2. Call your state or territory's early intervention program to find out if your child can get services to help. Learn more and find the number at [cdc.gov/FindEI](https://www.cdc.gov/FindEI).

For more on how to help your child, visit [cdc.gov/Concerned](https://www.cdc.gov/Concerned).

Don't wait.
**Acting early can make
a real difference!**

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Encourage “free play,” where your child can follow her interests, try new things, and use things in new ways.
- Use positive words and give more attention to behaviors you want to see (“wanted behaviors”), than to those you don’t want to see. For example, say “I like how you gave Jordan the toy.”
- Give your child food choices that are simple and healthy. Let him choose what to eat for a snack or what to wear. Limit choices to two or three.
- Ask your child simple questions about books and stories. Ask questions, such as “Who?” “What?” and “Where?”
- Help your child learn how to play with other children. Show him how by helping him share, take turns, and use his “words.”
- Let your child “draw” with crayons on paper, shaving cream on a tray, or chalk on a sidewalk. If you draw a straight line, see if she will copy you. When she gets good at lines, show her how to draw a circle.
- Let your child play with other children, such as at a park or library. Ask about local play groups and pre-school programs. Playing with others helps him learn the value of sharing and friendship.
- Eat family meals together as much as you can. Give the same meal to everyone. Enjoy each other’s company and avoid screen time (TV, tablets, and phones, etc.) during meals.
- Limit screen time (TV, tablets, phones, etc.) to no more than 1 hour per day of a children’s program with an adult present. Children learn by talking, playing, and interacting with others.
- Use words to describe things to your child, such as big/small, fast/slow, on/off, and in/out.
- Help your child do simple puzzles with shapes, colors, or animals. Name each piece when your child puts it in place.
- Play with your child outside. For example, take your child to the park to climb on equipment and run in safe areas.
- Allow your child to eat as much or as little as she wants at each meal. Your job is to offer her healthy foods and it’s your child’s job to decide if and how much she wants to eat.

To see more tips and activities download CDC’s Milestone Tracker app.

This milestone checklist is not a substitute for a standardized, validated developmental screening tool. These developmental milestones show what most children (75% or more) can do by each age. Subject matter experts selected these milestones based on available data and expert consensus.
